

Suitable Types of Garage Doors

Sectional Type Doors

Distinguishing Features :-

A door which is made up of horizontal sections which are hinged together. The door is guided by tracks which allow the door to slide up and over until it lies in a level attitude when in the open position. The door has both horizontal and vertical guide tracks.

Spring Balanced Tip-up Doors

Distinguishing Features :-

A "One-piece" Tip-up door which has no track mechanism. When the door opens, a portion of the door moves through the opening to the outside of the garage. When fully open the door is partly inside and partly outside the garage.
